

# TRACER<sup>®</sup><sub>VM</sub> FLOWMETER with USER INTERFACE

## **General Description**

Tracervm Flowmeter with User Interface measures liquid flow rate and temperature while providing a selectable analog voltage and programmable switch. TracerVM Flowmeter with User Interface calculates BTU's per minute and incorporates FCI (Flow Characteristic Indicator) in support of Scientific Cooling<sup>SM</sup> principles.

Vortex sensor technology is highly accurate and repeatable without moving parts. Flow reading is direction specific. Refer to the arrow on the body for correct flow direction for installation.

8 to 28VDC power source is required to supply the flowmeter. Sealed push-buttons configure the flowmeter and switching operations through user-friendly menus.

Separate analog outputs facilitate data collection of temperature and flow rates. The voltage outputs are user-selectable using onscreen menus: 0 to 5 Volts or 0 to 10 Volts.

FCI helps optimize systemic water usage. "TF" on the digital display signifies the presence of Turbulent Flow, or optimum cooling water efficiency. 0, 10, 20 or 30% glycol mix is supported in Turbulent Flow calculations.

SPDT switch is programmable for one to four set points: low flow, high flow, low temperature, high temperature or turbulent flow condition. Set points may be turned on or off in any combination to signify an alarm state.

Totalizer function provides volume display from a user-selected start point.

English or Metric units for flow and temperature can be changed at any time.

#### **Applications**

Tracer flowmeter is suitable for use in industrial water applications such as: injection mold cooling, die cast cooling, filter condition indication and more.

Tracer<sub>VM</sub> Flowmeter with User Interface is ideally suited for connection to data acquisition systems. These systems give plastics injection molders real-time statistical process control.

Annual calibration is recommended for best results. Flow sensor and user interface electronics are paired and must be used together once calibration is complete.

#### **Remote User Interface**

User Interface may be mounted up to 2.9M (9.5ft) away from the Tracer<sub>VM</sub> Base Model (sensor and flow body without display). Use the "R" designator in the model number for a completely new unit or order a stand-alone Remote User Interface to use with an existing Base Model.

#### Add User Interface to Existing Base Model

Tracer<sub>VM</sub> Base model without User Interface can be upgraded. User interface electronics installation, initial setup and calibration are performed at the factory. See page 4 for ordering information.

## **Specifications**

Flow Ranges and Accuracy							
Body Size	Range (LPM)	Range (GPM)					
3/8" & 1/2"	1 to 15	.3 to 4					
3/8" & 1/2"	2 to 40	.5 to 10.6					
3/4" & 1"	5 to 100	1.3 to 26.4					
1" & 1-1/2"	10 to 200	2.6 to 52.8					

Flow Accuracy	. ±1.5% of Full Scale
Temperature Range	0°C to 100°C
	(32°F to 212°F)
High Temperature Models	
15 & 40 LPM only	0°C to 120°C
	(32°F to 248°F)
Temperature Accuracy	±0.5°C
Operating Pressure	10.3 bar max.
	(150 psi max.)
Barris	

#### Power

Power Supply	8 to 28 VDC (external)
Switch Rating	
Flow and Temp Signals	0 to 5 or 0 to 10 VDC

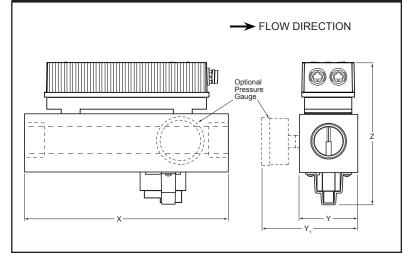

#### Materials

Sensing Element
Silicone-Based MEMS Sensor
Seal (sensor to housing) EPDM
InsertPPA 40 GF
3/8" & 1/2" Body Size Glass-Filled Nylon
Flow Body with
Brass or Nylon End Caps
3/4" thru 1-1/2" Body SizeAnodized Aluminum
or Stainless Steel Flow Body

#### 3/8" or 1/2" Body Sizes (Nylon or Brass End Caps) → FLOW DIRECTION 177mm with pressure gauge 89mm 3.5" 165mm 6.5" 46mm 1.8" n $\bigcirc \bigcirc$ 114mm 4.5" 6 (1 E Optional Ontional Pressure Gauge essure Gauge

#### 3/4" thru 1-1/2" Body Sizes Aluminum or Stainless Steel

(pressure gauge not available with AL body)

Dimensions (mm/inches)							
Body Size	X	Y	<b>Y</b> <sub>1</sub>	Z			
3/4", 5 to 100 LPM	178/7.0	45.7/1.8	77/3.1	117/4.6			
1", 5 to 100 LPM	178/7.0	45.7/1.8	77/3.1	117/4.6			
1", 10 to 200 LPM	178/7.0	51/2.0	84/3.3	122/4.8			
1-1/2", 10 to 200 LPM	198/7.8	58/2.3	90/3.6	130/5.1			

#### Directives

Flow sensors are in conformity with these Council directives on the approximation of the laws of the EC member states:

- Low Voltage Directive (2006/95/ED)
   Standards used: EN 61010-1:2001
- EMC Directive (2004/108/EC) Standards used: EN 61326-1:2006 and

61326-2-3:2006 Smartflow Vortex flow sensors fall under Article 3, 3

of PED Directive 97/23/EEC and are therefore not required to be CE-marked according to this directive.

#### Add User Interface to Existing TracervM Base Model

User Interface can be added at the factory to customer-supplied  $\mathsf{Tracer}_{\mathsf{VM}}$  without local display. Two part numbers are required.

- 1. Contact the factory for RMA number.
- Local Interface, order part number: VMUI-100
   -or-
- Remote Interface, order part number: **VMUI-100-R** 3. Choose cable per below:
  - EFM-CBL-OPC.....Loose leads (standard, ends stripped)
  - CBL-VMI-WWA ...... 120VAC power supply wall adapter
  - EFM-CBL-OPC-O.....Cylindrical connectors for use with RJG IA1 module

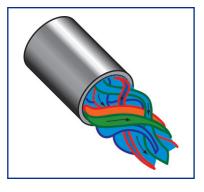

### **Turbulent Flow Basics**

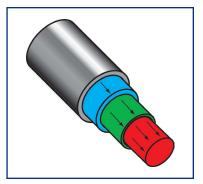

Turbulent water flow is much more efficient at removing heat in a cooling system than water flowing under laminar conditions. Once turbulent flow is achieved, increasing the flow rate does not significantly improve the cooling rate of the system.

in molding applications, many mold operators try to maximize the flow of water through their cooling systems to ensure turbulent flow. Doing so increases energy costs for pumping more water than necessary through the system. This practice may also limit the amount of cooling water available for cooling additional molds on the same cooling system circuit.

By insuring turbulent flow using FCI Technology, less water can be used in the molding process, saving precious resources.
